KESHAV PRAJAPATI

Junior DevOps / Cloud Engineer

Lucknow, UP, India (Open to Relocation) | +91 9115294619 | keshav.prajapati830@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

DevOps/Cloud engineer with hands-on project experience in AWS EKS, Kubernetes, Terraform, CI/CD pipelines, GitOps delivery, and observability, built through self-directed infrastructure and deployment work. Comfortable working across containerization, DevSecOps scanning, and monitoring tooling. Currently pursuing AWS Solutions Architect Associate (SAA-C03) certification and seeking an entry-level DevOps or Cloud Engineer role.

TECHNICAL SKILLS

Cloud: AWS (EKS, EC2, ECR, VPC, IAM, S3, Route 53, ALB, EBS CSI)
Containers & Orchestration: Docker, Kubernetes, Helm, Kustomize, Gateway API, Horizontal Pod Autoscaling (HPA)
Infrastructure as Code: Terraform (Remote State with S3)
CI/CD & GitOps: Jenkins, GitHub Actions, Argo CD, Argo CD Image Updater, GHCR
DevSecOps: SonarQube, Trivy
Monitoring & Observability: Prometheus, Grafana, Alertmanager, ELK Stack (Elasticsearch, Kibana, Filebeat)
Networking: ExternalDNS, Route 53, Load Balancers, VPC
Scripting & OS: Python, Bash, Linux Administration (Ubuntu, Amazon Linux, CentOS)
Version Control: Git, GitHub

PROJECTS

CI/CD Pipeline on AWS EKS with Jenkins and Argo CD (Amazon Prime Clone) | GitHub Link

Technologies: Terraform, Jenkins, SonarQube, Trivy, Docker, AWS (EKS, ECR, IAM, Route 53), Argo CD, Helm, Prometheus, Grafana

- Provisioned the Jenkins server and an EKS cluster with Terraform, and built a cleanup pipeline plus *terraform destroy* workflow to control cloud cost.
- Built a parameterized Jenkins CI pipeline covering Git checkout, npm install, SonarQube analysis with a quality gate, and Docker build.
- Integrated Trivy image scanning and pushed images to private AWS ECR, tagged by build number, with automated cleanup of local images.
- Implemented GitOps delivery with Argo CD syncing Kubernetes manifests to EKS, exposed through a load balancer on a custom Route 53 subdomain.
- Deployed Prometheus and Grafana via Helm with dashboards for CPU, memory, and pod health, and secured the pipeline with least-privilege IAM and Jenkins credentials.

GitOps-Driven Microservices Platform on AWS EKS | GitHub Link

Technologies: Terraform, GitHub Actions, GHCR, Argo CD, Image Updater, Helm, Kustomize, Gateway API, ExternalDNS, Trivy, Prometheus, Grafana, Alertmanager, ELK

- Provisioned an EKS cluster and bastion host with Terraform, using an S3 remote backend with versioning and encryption.
- Built GitHub Actions CI that detects changed services, builds only those in a matrix with Docker caching, scans with Trivy, and pushes sha-tagged images to GHCR.
- Implemented GitOps delivery of 11 microservices with Argo CD (Helm + Kustomize, auto-sync, prune, self-heal) and automated image rollouts with Argo CD Image Updater.
- Exposed services over HTTPS using Gateway API on an AWS ALB, with ExternalDNS creating Route 53 records through EKS Pod Identity.
- Set up Prometheus, Grafana, and Alertmanager (Slack alerts), ELK logging with Filebeat on EBS volumes, and Metrics Server with HPA, verified under simulated load.

EDUCATION

Bachelor of Computer Applications (BCA) — Shri Ramswaroop Memorial University, Lucknow, India
Aug 2021 – Aug 2024

CERTIFICATIONS / TRAINING

- AWS Certified Solutions Architect – Associate (SAA-C03) — In Progress
- DevOps Beginners to Advanced with Projects — Udemy (Certificate)
